## RAYONNAGE MINIRACK SYSTÈMES

Ce système, généralement préféré pour les charges légères parmi les étagères galvanisées, dispose de 3 longueurs de traverse différentes (750, 1000, 1250, 1500 mm). Les longueurs de jambe peuvent être produites de 1000 mm à 4000 mm. Comme table, des tables en tôle galvanisée à double torsion de 250 mm de large sont utilisées.

Les hauteurs de traverse peuvent être ajustées selon la taille souhaitée en passant 25 mm et ses multiples et 3 crochets.

Ces systèmes, qui répondent à toutes sortes de besoins, sont généralement utilisés dans des secteurs tels que les archives, les pièces détachées automobiles, l'hôtellerie, l'alimentation, les hôpitaux, le textile, l'automobile.

JORHSON Les systèmes de rack minirack galvanisés sont respectueux de l'environnement. Aucune équipe de soudage, de peinture ou de montage requise.
